---

Hi Mr. Moore,

Sorry for the delay, I got busy at work. The resident we spoke to that day was (b) (6). Her address is (b) (6). Other nearby residents are attached. Everyone will appreciate the sampling you suggested. Thanks.

-Dr. Nance

Dr. Nance:

Please give me her address and we will go by and check for VOCs at her house or at the fenceline of the site to see if we are picking up anything of significance. I realize that the odors are awful as I am dealing with it on a daily basis while on-site.

Thanks

Hi Mr. Moore,

Thanks so much for your time and expertise, and for your prompt response. The students and I visited the resident's home to see for ourselves. There is a tank farm right behind her house, and she and all the neighbors are experiencing horrific smells and deposition, and they are afraid there could be an explosion. When I got home I went immediately into the shower. As I washed my hair, my eyes started burning from whatever had been deposited. And it took a long time for the chemical taste in my mouth to go away. The residents are rightly concerned and if I lived there I would be very upset too. There are simply not enough resources to do what needs to be done at this site.

I appreciate what you are doing and your willingness to make the data available. It is important for the community to understand what you are discovering. I am so glad you were there today to introduce us to the site. Thanks again.

I understand her frustrations since she has been putting up with this site during the facility operations, during the failed attempts by the trustee to eliminate the threat. I have invested alot of time and energy to make the Government Cleanup (EPA/TCEQ) a successful, efficient, and safe operation.
